Your advantages

- **Extremely power saving**
- **Quality from Austria**
(directly from the manufacturer)
- **Easy assembly** and installation
- **Comfortable operation** due to user-friendly thermostats
- **Maintenance-free** and efficient in operation
- Space-saving and **flexible use**
- **Comfortable, healthy room climate** due to less convection

No other heating system is more energy efficient and easier to use than a heatness® infrared heating system.

Heating systems

- Wall and ceiling mounting possible
- Each room individually controllable
- Many designs - suitable for the respective living space
- Simply plug in and feel good!

4 steps to your heating system

1 DETERMINE SIZE

2 DETERMINE POSITION

Rudi's tip:

Heat your rooms easily -
save a lot of electricity costs!

3

SELECT PRODUCT LINE

4

CHOOSE THERMOSTAT

1. Determine size

Rudi's tip:

Comparable to the horsepower of a car, the more power the higher the comfort of heatness® heaters.

As a result, the heating system reaches the desired temperature much faster.

So if in doubt, round up.

The calculation

40W – 60W
per m^2 *

The calculation

* This calculation is based on an insulated room with 2.5m ceiling height.

XL

(700–800W)

.....

~15m²
60×120cm

L

(500–600W)

.....

~10m²
60×90cm

M

(350–400W)

.....

~7m²
60×60cm

S

(400W)

.....

~5m²
30×120cm

XS

(300W)

.....

~4m²
30×90cm

2. Determine position

Where to place the heaters?

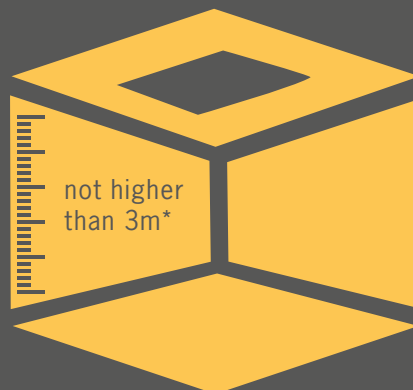

Infrared heaters should be placed similarly to lamps. The area which is directly affected by infrared waves, warms up very quickly. This warmth gradually spreads throughout the room.

Placement options for every need:

Wall mounting

Ceiling mounting

* For room heights above 3m, we recommend suspending the ceiling heaters slightly from the ceiling using our ceiling mounting kit C-02.

Rudi's tip:

Generally, the heaters should be mounted in areas which are most frequented in the room.

The heaters should be directed into the room.

Opposite of windows is not an ideal position - heat energy is lost.

The heaters should not be blocked by e.g. furniture. The infrared heat waves should reach as many objects as possible.

heatness® spreads warmth in the room like a lamp spreads light.

3. Select product line

Rudi's tip:

With our special ceramic coated surface we achieve optimal heat radiation.

Heaters for every style

With our heatness® infrared heaters you can choose from 6 different surfaces.

Depending on the interior style, the heaters blend discreetly with the background or they set an accent enhancing any living space.

Surfaces styles:

Glass Ceramic

White Glass

Black Glass

Mirror

Simple PRO

Simple Picture (series)

The Fine Series: Glass Ceramic

Our special ceramic surface provides the best heat conduction, ensuring optimal heat radiation.

The efficiency is 4% higher compared to our simple series.
